Amber International ships the Terra LuminSound LS.32, a column housing the combination of speaker and lamp ideal for outdoor applications.

Standing 82.5cm tall and 18cm wide at its widest point, the LS.32 provides adjustable accent, path or landscape lighting together with high-fidelity sound.

The lighting section is uplight, downlight or both-- with each MR16 waterproof lamp providing a wide spread of warm light illumination. One can adjust the light by tilting the lamp within the cast aluminium housing.

Amber also offers a weatherproof low voltage power supply (optional) powering up to x18 MR16 lamps.

Meanwhile the LS.32's upper audio section houses a Terra 5.25-inch coaxial weatherproof speaker with an ACAD ceramic aluminium cone and a 0.75-inch aluminium dome tweeter.

The driver is mounted at a 45-degree upwards angle for wide sound dispersion. A built-in switch allows operation as a 70.7V or low impedance system, and customers can rotate the speaker casing by up to 358-degrees for precise sound direction.
