

Nicolaudie presents the Easy Stand Alone (SLESA) and Sunlite Touch-sensitive Intelligent Control Keypad (STICK) DMX lighting control ranges at ISE 2015, designed for both residential and commercial applications.

The SLESA range is a robust and cost-effective installation control solution. Installers simply need to connect the control to a PC via either USB or ethernet before building the required lighting programs on Nicolaudie software. Once created the controllers run scene programs in standalone mode, without need for a PC.

Meanwhile the STICK range offers wall-mounted control for architectural lighting applications. Each STICK package include a touch-sensitive interface and programmable standalone memory, and devices range from the programmable STICK-GU2 (includes preloaded RGB effects) to the network-capable STICK-DE3 (features colour display, support for 1024 DMX channels and storage for up to 500 scenes across 10 zones).

Also on show at ISE 2015 is the latest version of Easy Stand Alone, ESA2-- the Nicolaudie Windows and Mac OS X lighting control application.
