

Crestron announces a pair of products for in-wall and centralised 0 - 10V control for LED lighting-- the Cameo Wireless In-Wall LED Dimmer and In-Panel LED Dimmer Module.

The Cameo Wireless In-Wall LED Dimmer (CLW-DIMFLVEX-P) placeholder is designed for dimming 0 - 10V voltage light, and can be installed in any standard 1-gang wall box. It features field-replaceable engravable buttons installers can configure with various button layouts and designer colours, as well as white LED indicators providing visual reference of current dimming levels. The dimmer comes in 12, 230 and 277V models.

Meanwhile the In-Panel LED Dimmer Module (CLX-2DIMFLV8) placeholder enables centralised LED dimming and control of any load type (forward or reverse universal phase and 0 - 10V) with a single cabinet.

Both in-wall and in-panel dimmers are shipping now.
