The GJD TechSmart range of proximity detectors, laser sensors and LED illuminators gets Control4 integration through the addition of Simple Device Discovery Protocol (SDDP) software.

As a result, installers can integrate such products within Lutron and Rako lighting control systems, enabling more flexible home automation solutions. Through SDDP, Control4 system automatically finds and adds the GJD SDDP-enabled devices, reducing complexity and installation time. Custom installers also save time and avoid potential programming mistakes.

"We are extremely pleased to be a Control4 partner. The addition of SDDP software and certified Control4 Drivers considerably simplifies integration and enhances Control4 smart home systems," the company says. "GJD's products measure outdoor light level and ambient temperature, as well as providing perimeter detection and early intruder warning alerts to optimise environmental control and provide peace of mind for the home owner."

The SDDP integration also facilitates more versatile smart solutions for both home and commercial projects, delivering intelligent lighting, climate control and external perimeter protection and intruder protection.
