UK external detector and illuminator vendor GJD announces all IP drivers are officially Control4 certified, meaning GJD IP devices are Control4-ready straight out of the box.

Certified drivers must pass stringent testing in Control4 laboratories to ensure seamless integration. The certification includes the incorporation of Simple Device Discovery Protocol (SDDP), making integration of GJD IP devices with Control4 systems easy and seamless. GJD offers a wide range of IP devices, including external passive IR detectors, laser sensors, IR and white light LED illuminators, and the IPAnything I/O converter.

"We are extremely proud that our IP drivers are C4 certified," the company says. "GJD is fully committed to providing Custom Integrators with all of the benefits of a truly customisable network based security system. Our partnership will make it even easier for CI's to install and configure GJD into Control4 home and commercial automation projects."

GJD IP drivers are available to download from the Janus Technology website in the link below.
