Motorised window covering solution specialist QMotion presents the quiet-running automated Roman Blinds at ISE 2019, broadening the choice of window dressing styles for customers.

The battery-powered motorised system provides near-silent movement, optimum shading and easy, convenient operation at the touch of a button. It allows installers to easily retrofit a motorised Roman blind solution within a property, bringing new levels of convenience. The system is available with a maximum width of 3000mm x 2400mm drop, with maximum fabric weight of 5kg.

Customers can control the motorised Roman blinds via Amazon Echo Plus or integrate them within a part of a home system system from the likes of Control4, Crestron, Vantage, URC and Elan, among others.

Also on show at ISE 2019 is the TPro-30-- a quiet-running motorised curtain track solution featuring soft start/stop together with manual operation. The tracks are available with a radius curve or gradual bend, and with headings either in standard pinch pleat or wave curtain hooks.
