

LED Dimming White Paper From CEDIA

Written by Marco Attard
15. 12. 2010

CEDIA issues a white paper on dimming LED lamps in order to help professionals understand LED lighting's benefits, limitations and performance.

The document discusses available lamp types, their characteristics (like dimming range), different power sources (external or internal drivers) and performance. It also touches on LED dimmers.

LED lighting is more widely used nowadays thanks to its longer lifespan, fewer hazards and increased visual appeal compared to CFLs.
