---

Hunter Douglas connects legacy shading products and smart technology with PowerView Motorisation bringing light filtering, exterior view, room darkening and privacy features in every room of the smart home.

The portfolio includes over 20 customisable styles, including roller shades, Duette Honeycomb shades, Vignette modern roman shades, Luminette privacy sheers, Design Studio drapery and shutters. Customers can add automation movement to window treatments throughout the home. When made smart Hunter Douglas shades, blinds and more are compatible with a wide range of control devices, including the Hunter Douglas PowerView App and Pebble remote, voice control with Amazon Alexa, Google Assistant and Siri, as well as home automation platforms such as Apple HomeKit, Control4, Crestron, ELAN, IFTTT, Logitech Harmony Home, Universal Remote Control, RTI and Savant.

Homeowners can use the PowerView app to operate shades independently on command, or group window treatments and create schedules based on time of day, or sunrise and sunset. One can also coordinate smart shades with other connected devices, including thermostats and lights, security systems and smart locks integrated in the same platform, as well as scenes activating automatically with a single voice command or button press.

The Hunter Douglas PowerView Motorisation portfolio is available now.
