Savant partners with USAI Lighting to debut Daylight Mode, a system to align lighting schemes to match the natural circadian progression based on time-of-date, something the company says can promote healthy living.

Users can personalise Daylight Mode to suit individual lifestyle and situational changes, with the Savant App suggesting a circadian curve highlighting time-of-day settings for colour temperature and lighting intensity throughout the day. The Savant app adjusts lighting for related factors such as geography, time zone and season, and users can further personalise lighting by adjusting timing, intensity and colour temperature settings.

Users can also turn on and off Daylight Mode in specific rooms in the home, and have keypad buttons instantly override circadian settings for specific task lighting, entertainment settings and more. Any Savant Scene can include Daylight Mode settings. For instance, the homeowner can recall a kitchen scene at 10 AM to have the lighting come on at an intensity and colour temperature aligned with the time of day. The same Savant Scene activated at 8 PM results in lighting settings in accordance with the evening hours, maintaining circadian rhythm and a healthier cycle.

In order to support such features, Savant has a lighting and energy education space within the Savant Experience Centre, designed to provide installers and clients with a firsthand look at wellness, lighting and energy automation features for enhanced living. Daylight Mode is available now.
