Lutron embraces bespoke finishes at ISE 2020, as it presents an Antique Brass finish to the Palladiom keypad and thermostat range, a finish the company says is the most highly-sought after in Europe.

The result of a partnership with UK-based electrical wiring accessory designer Focus-SB, the raw brass faceplate kit for Palladiom keypad allows installers to offer bespoke finishes to specifiers and end users. In addition to 20 standard finishes, the company offers a potential of "hundreds" of different custom finishes installers can design to match any aesthetic, coordinating with or complementing other hardware, fixtures or accents in a space.

Luxury elements are not limited to control systems. The shading range also gets such options, with additional finishes for Palladiom blinds and aesthetic options across several styles, including sheer fabrics, more colour options and wood slats for Venetian blinds. The company also promises improvements on the Roller 64 drive making it more quiet.

"We're constantly keeping an eye on industry trends, whether those are technology or design-based," Lutron says. "ISE is the perfect place to debut our latest innovations in residential and commercial spaces, as we can educate European installers, electrical engineers and integrators, not only on where we see the European market, but also on consumer demands."
