Marmitek launches three HDMI splitters as part of the Connect range-- the Split 412, 414, and 422, all supporting 3D formats and coming inside "solid" interference-free metal cases.

The splitters carry a built-in repeater and equaliser, which Marmitek says ensure picture and sound quality retention while allowing the use of longer HDMI cables.

The Split 412 allows the connection of 1 HD source to x2 HDTVs, while the 414 connects 1 HD source to x4 HDTV. The 422 connects x2 HD sources to X2 HDTVs or projectors, with a built-in HDMI switch providing easy switching between video sources.

The Split series has ATC certification and is compatible with all HDMI-certified devices.
