Marmitek launches the GigaView 811 A/V sender, a plug-and-play solution for the wireless connection of HDMI-compatible devices to HDTVs or projectors.

It sends signals from any device with HDMI output (complete with 3D support), with HDCP standard compliancy and zero compression.

The GigaView 811 comes in 2 parts-- transmitter and receiver. The receiver is small (95x95x32mm) and easily mountable beneath TVs or next to projectors.

Being plug-and-play it is also ideal for turning PCs into media centres without installation of software.

Operational range is up to 10m (with line of sight) or 5m (without LOS).
