Klein Tools launches the Coax Combination Radial Stripper-- a tool allowing installers to strip both utility and standard size cables, including RG6, RG6-QS, RG59, RG11 and RG7.

It provides 2-level (outer jacket and dielectric [7.9mm and 6.4mm]) stripping in 1 step, as the sliding depth gauging removes guesswork out of repeatable cable end preparation. It also prevents installers from using their fingers as a backstop on sharp wire tips.

High-carbon steel cutting blades automatically adjust to different cable diameters, while the finger loop facilitates controlled rotation.
