logear launches the Wireless 5x2 HD Matrix (GWHDMS52) at CES 2013-- a means to send separate uncompressed 1080p content from up to x5 sources to 2 displays or projectors.

The matrix handles both digital and analog sources, with independent switching between sources.

According to the company through the Wireless 5x2 HD Matrix allows customers to keep cable box, Blu-ray player, game console and media server in one room, with an HDTV accessing content and another HDTV receiving separate content wirelessly in any room.

Signal range is up to 30m.

The Wireless 5x2 HD Matrix will be available from Q2 2013.
