

Smart-e launches the FuSionHD range at ISE 2013-- a product series combining the best features from analogue AV and HD digital technologies, chiefly HDMI, CAT5e-8, DVI, fibre and USB KVM.

The company says the product line is ideal for home cinema and small office applications, as well as digital signage and multi-room corporate communications.

"Digital is great for many applications however there is a case, and numerous client requests, for solutions that require digital and analogue AV combined in one product for shared resource purposes," Smart-e MD Jon Lane says.

Kit making an ISE 2013 debut includes a multi-format wall plate range combining HDMI, analogue and digital inputs via CAT6, an HDMI splitter range distributing audio and video from a single source to up to 8x displays and an upgrade on the SmartDigital MCT-16 matrix.

Also on show is the company's digital-only AV product range and traditional analogue equipment.
