Atlona shows off the now EU-certified LinkCast Wireless HD System at ISE 2013-- the wire-free system for customers to get content from up to x4 HD sources on TVs, projectors or AV receivers.

It supports video resolutions of up to 1080p, as well as full 3DTV video, Dolby Digital and DTS 5.1 digital audio, with high-speed HDMI, HDCP-compliant connections.

Also launched at the show are Control4 drivers for the Pro3HD, Pro2HD and H2H HDMI matrix switcher series, ensuring integration and compatability in residential and commercial AV systems using the Control4 platform.

“Working alongside Atlona during ISE 2013, it was apparent that the company shares a vision that we at Control4 have long held,” Control4 president of sales Jim Arnold says. “In order to drive home automation adoption, everything in the home must work together, resulting in ultimate customer satisfaction.”

Atlona also offers drivers to integrate with solutions from Vantage, neets, RTI, URC, Elan, Clare Controls and On Controls.
