---

Extron announces the XTP DTP 24 twisted pair cable-- a high performance cabling product certified to deliver up to 475MHz of bandwidth for up to 100m.

"XTP DTP 24 Cable is engineered specifically for digital video applications to provide integrators with absolute confidence in signal integrity throughout the largest distribution systems," Extron says.

It features an SF/UTP shielded foil/unshielded twisted pair design and features 24 AWG solid copper conductors within overall braids and foil shields.

XTP DTP 24 cable is available in plenum and non-plenum versions in 305m spools with self dispensing packaging. Extron also offers a matching line of shielded RJ-45 plugs, punch down jacks and couplers in packages of 10.
