DVDO launches the Quick6-- a 4K (aka Ultra HD/UHD) HDMI Switcher complete with InstaPrevue and MHL technologies, as well as all latest video functionalities.

It carries x6 300MHz HDMI inputs and x2 outputs (as well as S/PDIF optical and coax outputs) making it ideal for integration with existing A/V Receivers (AVR), upgrading and future-proofing (with 4K support) your customers' home theatres.

A pair of MHL inputs allow connection to MHL-enabled mobile devices, while InstaPreview provides live on-screen previews from active inputs.

Further features include InstaPort S Technology (allows near-instantaneous input switching), picture-in-picture, Audio Return Channel (ARC), automatic switching and a USB port for easy firmware updates.
