We all know the pain of dropping a screw in a hard-to-reach spot... Impeltronics proposes a solution to such woes with the Extendable Telescoping Magnetic Flashlight.

A useful addition to any tool kit, the flashlight carries x3 LEDs and magnets at both ends to help find lost objects. It also telescopes from 15cm to over 50cm in length, with a flexible head allowing 360-degree directional rotation.

Made in aluminium, the flashlight uses x4 LR44 batteries (included) and includes a stainless steel clip.
