High-performance cable maker Tributaries will launch the Series 4 cables at CES 2014, an interconnect cable series handmade at the company's Orlando, Florida HQ.

The Series 4 cables promise a level of performance superior to the company's previous Series 3 and 5 cables through a new internal design and updated exterior sheathes.

According to Tributaries the cables incorporate a twisted-pair geometry with solid-core conductors producing more accurate information transfer. Digital cables use 75 ohm coaxial designs with heavy duty solid conductors.

Series 4 audio cables come in analog RCA, balanced audio and subwoofer mono and Y flavours. The Digital/Video 75 ohm cables are for digital audio and analog video.
