Sure MIT Cables One Wire install system is easy and quick to use (no soldering is required) but the bigger sales point is MIT's patented Network Modules that give a wider bandwidth of frequency through the cable and allows for very long cable runs with almost no signal loss.

If that doesn't catch your interest, then maybe we should mention MIT Founder Bruce Brisson began designing audio cables in the 1970's and in the 1980s he licensed his "Bandwidth Balanced" technology to Monster Cable. Later he also licensed other phase correct, or time coherent designs to Monster, which have become some of Monster Cable's most enduring and successful products. Ha! Got your attention now...
