CMoDe announces a makeover for its uniDock on-wall mobile device charging dock-- the uniDock Aluminium, featuring 3 integrated connectors in a pull out and rotate design in either anodized black or silver.

It features a Lighting, rotating micro USB B and standard USB 2.0 connectors, allowing it to handle just about any device.

High-power 10W 2A output allows the dock to simultaneously charge 2 devices, and it also features an integrated LED night-light users can operate via touch sensor.

Installation should be easy enough as the unit fits a standard 35mm deep EU backbox.

“The aluminium finish is a fantastic addition to the product line,” distributor Invision says. “By using this lightweight but strong material CMoDe have managed to improve the handling of the product as well as giving a great look and feel."
