

DVDO announces the iScan Micro-- a cable-dongle accessory able to convert SD and HD video signals up to 4K @ 60Hz via the company's VRS ClearView technology.

It also features a “studio-grade 4K Ultra HD adaptive scaling engine,” as well as other noise reduction and picture enhancement technologies, all in an HDMI-compatible form factor small enough to hide behind an existing TV.

Further specifications (such as compression stats, frame rate details, colour sampling rates or colour bit depth) are not available.

The iScan Micro ships on late Q2 2015.
