Hamilton-Litestat launches Vogue-- a wiring accessory range featuring a contemporary new design of white moulded bevelled edged products with slim ergonomic front plates and screw covers.

"The move towards simple and subtle is clear. In terms of finishes-- lots of neutral whites, subtle blends of bronze tones and the understated are the look of the moment," the company says. "We have applied the exact same care and attention to detail to this new range as we pay to our designer collections and bespoke pieces."

Vogue products promise easy installation, with minimal back box space requirements (16mm switches, 25mm sockets) and sleek screw cap covers. Colour coded terminals allow for further simplicity, together with mains, LV and LED dimming. Product and Grid options, such as the LEDstat intelligent LED dimmer, are available as well.

The plates also feature multimedia options included Euro modules (fit into euro plates compatible for A/V applications) and Bespoke Grid solutions with 1 to 8 gang plates and full module range (switches, neons, key switches). USB charging in switched 1 gang and 2 gang sockets will also be available.

Hamilton adds all Vogue products are quality tested against corrosion and scratches, and are ASTA approved.
