

Audience Intros Au24 SX Cables

Written by Marco Attard
03. 02. 2016

Audience announces the "top of the line" Au24 SX range of interconnects, loudspeaker, phone and digital cables, all promising to exceed the performance of the company's previous Au24 cable lines.

Improvements include XLPE (cross-linked polyethylene) dielectric material, higher-purity "six nines" copper and better cable geometry. The cables are also of a heavier gauge than previous Au24 lines, and are more relaxed yet more dynamic sonically, with a richer tonal palette.

The RCA connectors feature a proprietary solder-free design, while the XLR interconnect offers a new true dedicated differential cable designed solely for use with balanced circuits. Like previous Au24 cables, the Au24 SX line has low mass and low eddy current resistance designs using minimal jacketing materials.

The Au24 SX cables and interconnects are available now.
