Wisdom Audio announces standard and custom interconnect cable kits as part of its high-end audio product lineup, with each kit featuring "oxygen-free" high-conductivity copper conductors.

The cables also promise protection from cracking and wear, as well as high-speed transmission, through high-grade foam polypropylene insulation. A Star-Quad design offers maximum protection against electrostatic interference, and each wire is numbered for ease and efficiency of installation.

The WWK-B kit includes 10 balanced XLR female to XLR male numbered 1m cables, 17 balanced XLR female to XLR male numbered 1.5m cables, six 1/8-inch mini DC trigger cables and two balanced XLR Y-adaptor female to dual male XLR. The WWK-CUSTOM is a special ordered kit installers can customise to any length and/or termination to fit any application.
