The Covid category cable product lineup gets HDBaseT-certified bulk cables, with plenum and non-plenum versions available in lengths reaching up to 305m.

The cables are pre-packaged inside convenient Reelex boxes offering easy pulling that's free from messy tangles. The plenum cables come in a choice of black or blue jacket colours.

HDBaseT allows for the transmission of HDMI signals for long distances over one Cat5e or Cat6 cable. The Covid cables are specifically certified and rated for such use, and the company also offers related connectors, tools and HDBase-T transmitter/receiver products.
