Pro Video Instruments (PVI) has a compact solution to address HDMI video distribution via coax-- the VeCOAX MiniMod-2, a means to eliminate unnecessary cables while being simple and scalable.

“There are other solutions out there but none that give users the control and scalability needed for more complex applications”, PVI says. “By using a simple splitter attached to a VeCOAX MiniMod-2, users can take their HDMI signal at full 1080p quality, to an unlimited number of TVs. That’s scalability”.

The MiniMod-2 is on show at the InfoComm 2018 show together with the VeCOAX Rack 4, a commercial solution allowing for even greater scalability and organisation.
