

New Crestron Backboxes for Compatibility

Written by Marco Attard

Crestron launches 2 universally compatible backboxes-- the BBI-UNIV-A and BBI-UNIV-B, suiting a variety of devices, including Crestron touchscreens, in-wall iPad docks and Excite 5.25" and 6.5" in-wall speakers.

The backboxes are ideal for multi-purpose and multi-regional use, coming in 2 sizes working with a wide selection of Crestron devices. The company says the housing design "ensures a stable and secure fixing."

Installation requires a suitable wall aperture or opening. Once cables are fed through with the conduit, installers should fasten the housing into the wall before either clamping equipment (touchscreen, Excite speaker, iPad dock) or securing via screws into the mineral fibreboard.
